# José David Campos

## Junior Data Scientist | Computer Science Undergraduate

Caracas, Venezuela (Remote / Hybrid) | +58 414-2486426 | jd19122003@gmail.com | linkedin.com/in/josedavidcampos | github.com/JD1714

### Professional Summary

8th-semester Computer Science undergraduate with a solid foundation in predictive modeling, Machine Learning, Deep Learning (Transformers/PyTorch), NLP, and end-to-end software development. Hands-on experience in feature engineering, exploratory data analysis (EDA), data automation pipelines, and interactive web deployments using React and Streamlit. Passionate about transforming complex datasets into scalable, production-ready machine learning solutions.

### Academic & Professional Experience

**Software Development & Data Reporting Intern — Faculty of Economic and Social Sciences (FaCES - UCV)**

05/2026 – 10/2026

React, Google Apps Script, JavaScript, Data Automation Pipelines

- Engineered an automated reporting and data pipeline to streamline institutional administrative workflows, significantly reducing manual data compilation time.
- Developed responsive user dashboards in React integrated with Google Workspace APIs for real-time institutional data consolidation and auditing.

**Software Developer (Frontend & Integration) — Kromáticos**

12/2025 – 05/2026

React, TypeScript, Zustand, Zod, REST APIs, Git

- Developed modular and high-performance interfaces for the Gravo web platform, focusing on real-time data visualization and reactive global state management.
- Integrated RESTful web services with strict runtime schema validation and type safety using Zod, ensuring payload data consistency and zero schema drift.

**Computer Networks Teaching Assistant — Universidad Central de Venezuela (UCV)**

2025 – 2026

Computer Networks, TCP/IP, Routing Protocols, Linux, Packet Analysis

- Instructed and led hands-on laboratory practice sessions for undergraduate students, reinforcing technical foundations in network architecture, sockets, and protocols.
- Facilitated packet inspection and diagnostic sessions, mentoring students on network troubleshooting in Linux environments.

### Featured AI & Data Science Projects

**Transformer-Based Toxicity Classifier (NLP)**

2026

Python, PyTorch, Hugging Face Transformers, NLP, Weighted Loss Functions

- Fine-tuned Transformer NLP architectures on large-scale text corpora for multi-label toxicity classification, optimizing tokenization and attention mechanisms.
- Mitigated severe class imbalance by implementing custom weighted cross-entropy loss functions, significantly boosting Macro F1-score across high-severity toxicity classes.

**Sports Metrics and Match Results Predictive System**

2026

Python, Scikit-learn, XGBoost, Random Forest, Pandas, NumPy, Streamlit

- Engineered multidimensional data cleaning and feature engineering pipelines (rolling averages, form indicators) over historical match datasets.

- Trained, validated, and benchmarked supervised machine learning models (XGBoost, Random Forest) using K-fold cross-validation and hyperparameter tuning.
- Deployed an interactive Streamlit web dashboard for real-time model inference and exploratory metric visualization.

**Prompt Engineering Framework & Generative Model Evaluation**

2026

LLMs, Prompt Engineering (Few-Shot, CoT), Python, Quantitative Evaluation

- Designed structured prompt patterns (Few-Shot, Chain-of-Thought) to maximize precision, reasoning consistency, and reduce hallucinations in LLM responses.
- Developed a systematic quantitative evaluation harness benchmarking model responses across semantic consistency and domain accuracy.

## Education

**B.S. in Computer Science (8th Semester) — Universidad Central de Venezuela (UCV)**

2021 – 2028 (Expected Graduation: 2028)

- Relevant Coursework: Machine Learning, Deep Learning, Algorithms & Data Structures, Probability & Statistics, Relational Databases (SQL).

## Technical Skills

- **ML & Deep Learning:** PyTorch, Hugging Face Transformers, Scikit-learn, XGBoost, Random Forest, NLP, Deep Learning, Predictive Modeling, Feature Engineering, Prompt Engineering, LLMs.
- **Data Analysis & SQL:** Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (PostgreSQL, MySQL), Exploratory Data Analysis (EDA), Statistical Modeling, Cross-Validation, Evaluation Metrics (F1, ROC-AUC).
- **Engineering & Tools:** Git/GitHub, Docker, REST APIs, Streamlit, Linux/Bash, TypeScript, React, Google Apps Script.
- **Languages:** Spanish (Native), English (Professional Working Proficiency / Technical Documentation Fluency).
